

## Renders/plasters

### Mechanical or manual application.

The combination of **Tradical® HF + Tradical® HB** is for renders/plasters with insulation characteristics that can be applied to every kind of clean and sound substrate. These insulating renders improve the surface contact heat feeling - and therefore the feeling of thermal comfort - as well as having excellent sound insulation properties. The vapour permeability of the renders and plasters, when applied to walls of appropriate materials, allows the building to breathe and self-regulate humidity levels. The application can be made by hand or by spray with adapted machines. The surface can be provided with several very different finishes and the applied thickness can be substantial, if required.

### Characteristics

Tradical® HF + Tradical® HB	
Dosing	500 to 700 kg/m <sup>3</sup>
Density	700 to 950 kg/m <sup>3</sup>
Thermal conductivity	$\lambda = 0,12$ to $0,13$ W/m.k
